<p></p><p>The TL;DR version of this review is: surprising light, extremely pocketable, does the job, not my dream charger but at 😊 the price it's well worth it.</p>
<p>We've covered a product of Lepow's before, the Moonstone. Like the Moonstone, the Poki comes 😊 with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6 † 😊 USB-> MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you're out. It's 😊 actually the first thing that stood out when I was looking at the device. The Moonstone is still going strong 😊 with a friend of mine a year later.</p>
<p>The battery delivers a 90% conversion efficiency rating according to specs on the 😊 manufacturer's website. Most batteries go from the high 70s to mid 80s. You want to see a higher number as 😊 this is how much power gets delivered with the rest being lost in conversion.</p>
<p>The Poki can charge and recharge at 😊 2.1amps. This means you're not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should 😊 be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of 😊 actual juice to spare. That should be enough for at least three complete charges from dead to full for any 😊 smartphone on the market today.</p>
<p>2.1 amp charging also means you're not going to spend ~7 hours charging a 3000mA phone 😊 from dead, more like an hour and a half if your phone supports it.charging that fast.</p>
<p></p><p>tros. Eles são o sapato máximo almofadado
